    Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.

    Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

    - **Material of gloves**
      - The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

    - **Penetration time of glove material**
      - The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.
