#### **SECTION 11 TOXICOLOGICAL INFORMATION**

#### Information on toxicological effects

Information on toxicologic	cal effects			
Inhaled	The material is not thought to produce adverse health effects or irritation of the respiratory tract (as classified by EC Directives using animal models).			
Ingestion	The material has NOT been classified by EC Directives or other classification systems as "harmful by ingestion".			
Skin Contact	The material is not thought to produce adverse health effects or skin irritation fo	llowi	ing contact (as classified b	y EC Directives using animal models).
Eye	Although the liquid is not thought to be an irritant (as classified by EC Directives), direct contact with the eye may produce transient discomfort characterised by tearing or conjunctival redness (as with windburn).			
Chronic	Long-term exposure to the product is not thought to produce chronic effects adverse to the health (as classified by EC Directives using animal models); nevertheless exposure by all routes should be minimised as a matter of course.

SODIUM CHLORIDE	The material may produce moderate eye irritation leading to inflammation.  The material may cause skin irritation after prolonged or repeated exposure and may produce on contact skin redness, swelling, the production of vesicles, scaling and thickening of the skin.
SODIUM SULFATE	for sodium sulfate: Sulfate (and sodium) ions are important constituents of the mammalian body and of natural foodstuffs and there is a considerable daily turnover of both ions (several grams/day expressed as sodium sulfate). Equivocal Tumorigen by RTECS criteria. Reproductive effector in mice.
WATER	No significant acute toxicological data identified in literature search.
SODIUM CHLORIDE & SODIUM SULFATE	Asthma-like symptoms may continue for months or even years after exposure to the material ceases.
