

# **ICP-MS-ICS-3 Solution AB**

#### **High-Purity Standards**

## Catalogue number: ICP-MS-ICS-3 Solution AB

Version No: 1.2 Safety Data Sheet according to OSHA HazCom Standard (2012) requirements

#### Issue Date: **06/02/2017** Print Date: **06/02/2017** S.GHS.USA.EN

Chemwatch Hazard Alert Code: 3

## **SECTION 1 IDENTIFICATION**

#### **Product Identifier**

Product name	ICP-MS-ICS-3 Solution AB
Synonyms	ICP-MS-ICS-3 Solution AB
Proper shipping name	Corrosive liquid, acidic, inorganic, n.o.s. (contains nitric acid and hydrofluoric acid)
Other means of identification	ICP-MS-ICS-3 Solution AB

#### Recommended use of the chemical and restrictions on use

Relevant identified uses	INTEGRITY CHECK: Product contains BOTH an acid and a base as ingredients.

## Name, address, and telephone number of the chemical manufacturer, importer, or other responsible party

Registered company name	High-Purity Standards
Address	PO Box 41727 SC 29423 United States
Telephone	843-767-7900
Fax	843-767-7906
Website	highpuritystandards.com
Email	Not Available

#### Emergency phone number

Association / Organisation	INFOTRAC
Emergency telephone numbers	1-800-535-5053
Other emergency telephone numbers	1-352-323-3500

#### SECTION 2 HAZARD(S) IDENTIFICATION

Classification of the substance or mixture	
Classification Acute Toxicity (Oral) Category 4, Acute Toxicity (Dermal) Category 4, Metal Corrosion Category 1, Skin Corrosion/Irritation Category 1A	
Label elements	
	$\land \land$

Hazard pictogram(s)	
SIGNAL WORD	DANGER

#### Hazard statement(s)

H302	Harmful if swallowed.
H312	Harmful in contact with skin.
H290	May be corrosive to metals.
H314	Causes severe skin burns and eye damage.

Chemwatch: 9-405775			Page 2 of 25	Issue Date: 06/02/2017
Catalogue number: ICP-MS-ICS-3 Solution AB			ICP-MS-ICS-3 Solution AB	Print Date: 06/02/2017
Version No: 1.2				
Not Applicable				
Precautionary statement(s	) Prevention			
P260	Do not breathe dust/fume/gas/mist/vapours/s	spray.		
Precautionary statement(s P301+P330+P331	) Response IF SWALLOWED: Rinse mouth. Do NOT inc	duce vomiting.		
Precautionary statement(s	) Storage			
P405	Store locked up.			
Precautionary statement(s	) Disposal			
P501	Dispose of contents/container in accordance	e with local req	gulations.

7440-47-3	0.002	chromium
638-38-0	0.002 (as Mn)	manganese(II) acetate
7440-02-0	0.002	nickel
7803-55-6	0.002 (as V)	ammonium metavanadate
7440-66-6	0.001	zinc
7440-50-8	0.002	copper
7782-49-2	0.001	selenium

# SECTION 4 FIRST-AID MEASURES

#### Description of first aid measures

Eye Contact	<ul> <li>If this product comes in contact with the eyes:</li> <li>Immediately hold eyelids apart and flush the eye continuously with running water.</li> <li>Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally lifting the upper and lower lids.</li> <li>Continue flushing until advised to stop by the Poisons Information Centre or a doctor, or for at least 15 minutes.</li> <li>Transport to hospital or doctor without delay.</li> <li>Removal of contact lenses after an eye injury should only be undertaken by skilled personnel.</li> </ul>
Skin Contact	<ul> <li>For thermal burns:</li> <li>Decontaminate area around burn.</li> <li>Consider the use of cold packs and topical antibiotics.</li> <li>For first-degree burns (affecting top layer of skin)</li> <li>Hold burned skin under cool (not cold) running water or immerse in cool water until pain subsides.</li> <li>Use compresses if running water is not available.</li> <li>Cover with sterile non-adhesive bandage or clean cloth.</li> </ul>

Chemwatch: 9-405775
Catalogue number: ICP-MS-ICS-3 Solution AB
Version No: 1.2

Page 3 of 25

## **ICP-MS-ICS-3** Solution AB

	<ul> <li>Do NOT apply butter or ointments; this may cause infection.</li> <li>Give over-the counter pain relievers if pain increases or swelling, redness, fever occur.</li> <li>For second-degree burns (affecting top two layers of skin)</li> <li>Cool the burn by immerse in cold running water for 10-15 minutes.</li> <li>Use compresses if running water in solt available.</li> <li>Do NOT apply ice as this may lower body temperature and cause further damage.</li> <li>Do NOT papk lotes or apply butter or ointments; this may cause infection.</li> <li>Protect burn by cover loosely with sterile, nonstick bandage and secure in place with gauze or tape.</li> <li>To prevent shock: (unless the person has a head, neck, or leg injury, or it would cause discomfort):</li> <li>Lay the person flat.</li> <li>Elevate feet about 12 inches.</li> <li>Elevate feet about 12 inches.</li> <li>Seek medical assistance.</li> <li>For third-degree burns</li> <li>Seek immediate medical or emergency assistance.</li> <li>In the mean time:</li> <li>Protect burn area acover loosely with sterile, nonstick bandage or, for large areas, a sheet or other material that will not leave lint in wound.</li> <li>Separate burned tors and fingers with dry, sterile dressrings.</li> <li>Do not sheak burn in water or apply ointernets or butter; this may cause infection.</li> <li>To prevent shock see above.</li> <li>For an alrway burn, do not place pillow under the person's head when the person is lying down. This can close the airway.</li> <li>Have a person with a facial burn sit up.</li> <li>Check pulse and breating to remoitor for shock until emergency help arrives.</li> </ul>
Inhalation	<ul> <li>If fumes or combustion products are inhaled remove from contaminated area.</li> <li>Lay patient down. Keep warm and rested.</li> <li>Prostheses such as false teeth, which may block airway, should be removed, where possible, prior to initiating first aid procedures.</li> <li>Apply artificial respiration if not breathing, preferably with a demand valve resuscitator, bag-valve mask device, or pocket mask as trained. Perform CPR if neccessary.</li> <li>Transport to hospital, or doctor, without delay.</li> <li>Inhalation of vapours or aerosols (mists, fumes) may cause lung oederna.</li> <li>Corrosive substances may cause lung damage (e.g. lung oederna, fluid in the lungs).</li> <li>As this reaction may be delayed up to 24 hours after exposure, affected individuals need complete rest (preferably in semi-recumbent posture) and must be kept under medical observation even if no symptoms are (yet) manifested.</li> <li>Before any such manifestation, the administration of a spray containing a dexamethasone derivative or beclomethasone derivative may be considered.</li> <li>This must definitely be left to a doctor or person authorised by him/her.</li> <li>(ICSC13719)</li> <li>For massive exposures: <ul> <li>If dusts, vapours, aerosols, fumes or combustion products are inhaled, remove from contaminated area.</li> <li>Lay patient down.</li> <li>Keep warm and rested.</li> <li>Prostheses such as false teeth, which may block airway, should be removed, where possible, prior to initiating first aid procedures.</li> <li>Apply artificial respiration if not breathing, preferably with a demand valve resuscitator, bag-valve mask device, or pocket mask as trained. Perform CPR if necessary.</li> <li>If dusts, vapours, aerosols, fumes or combustion products are inhaled, remove from contaminated area.</li> <li>Lay patient down.</li> <li>Keep warm and rested.</li> <li>Prostheses such as false teeth, which may block airway, should be removed, where possible, prior to initiating first aid procedures.</li> <li>Apply artificial respira</li></ul></li></ul>
Ingestion	<ul> <li>For advice, contact a Poisons Information Centre or a doctor at once.</li> <li>Urgent hospital treatment is likely to be needed.</li> <li>If swallowed do NOT induce vomiting.</li> <li>If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain open airway and prevent aspiration.</li> <li>Observe the patient carefully.</li> <li>Never give liquid to a person showing signs of being sleepy or with reduced awareness; i.e. becoming unconscious.</li> <li>Give water to rinse out mouth, then provide liquid slowly and as much as casualty can comfortably drink.</li> <li>Transport to hospital or doctor without delay.</li> </ul>

#### Most important symptoms and effects, both acute and delayed

See Section 11

#### Indication of any immediate medical attention and special treatment needed

Following acute or short term repeated exposure to hydrofluoric acid:

- Subcutaneous injections of Calcium Gluconate may be necessary around the burnt area. Continued application of Calcium Gluconate Gel or subcutaneous Calcium Gluconate should then continue for 3-4 days at a frequency of 4-6 times per day. If a "burning" sensation recurs, apply more frequently.
- Systemic effects of extensive hydrofluoric acid burns include renal damage, hypocalcaemia and consequent cardiac arrhythmias. Monitor haematological, respiratory, renal, cardiac and electrolyte status at least daily. Tests should include FBE, blood gases, chest X-ray, creatinine and electrolytes, urine output, Ca ions, Mg ions and phosphate ions. Continuous ECG monitoring may be required.
- Where serum calcium is low, or clinical, or ECG signs of hypocalcaemia develop, infusions of calcium gluconate, or if less serious, oral Sandocal, should be given. Hydrocortisone 500 mg in a four to six hourly infusion may help.
- Antibiotics should not be given as a routine, but only when indicated.
- Eye contact pain may be excruciating and 2-3 drops of 0.05% pentocaine hydrochloride may be instilled, followed by further irrigation

**BIOLOGICAL EXPOSURE INDEX - BEI** 

These represent the determinants observed in specimens collected from a healthy worker exposed at the Exposure Standard (ES or TLV):

Chemwatch: 9-405775 Catalogue number: ICP-MS-ICS-3 Solution AB Version No: 1.2		Page 4 of 25 CP-MS-ICS-3 Solution AB	Issue Date: 06/02/2017 Print Date: 06/02/2017
Determinant 1. Methaemoglobin in blood	Index 1.5% of haemoglobin	Sampling Time During or end of shift	Comments B, NS, SQ
B: Background levels occur in specimens collected fro	m subjects <b>NOT</b> exposed.		
NS: Non-specific determinant; Also seen after exposu	re to other materials		
SQ: Semi-quantitative determinant - Interpretation may	t be ambiguous; should be used as a screening	test or confirmatory test.	
restore blood volume and enhance renal excretion.	ay be retarded by calcium salts, milk or antacids ough the respiratory tract with 20-30% deposited oure; 50% appears in the urine within 24 hours. dequate tidal volume), monitor breathing and eva ythmias and evidence of Q-T prolongation or T-	d at alveolar level. aluate/monitor blood pressure and pulse frequently s wave changes. Maintain monitor. Treat shock vigor	

Where evidence of hypocalcaemic or normocalcaemic tetany exists, calcium gluconate (10 ml of a 10% solution) is injected to avoid tachycardia.

**BIOLOGICAL EXPOSURE INDEX - BEI** 

These represent the determinants observed in specimens collected from a healthy worker exposed at the Exposure Standard (ES or TLV):

Determinant	Index	Sampling Time	Comments
Fluorides in urine	3 mg/gm creatinine	Prior to shift	B, NS
	10mg/gm creatinine	End of shift	B, NS

B: Background levels occur in specimens collected from subjects NOT exposed

NS: Non-specific determinant; also observed after exposure to other exposures.

Both dermal and oral toxicity of manganese salts is low because of limited solubility of manganese. No known permanent pulmonary sequelae develop after acute manganese exposure. Treatment is supportive.

[Ellenhorn and Barceloux: Medical Toxicology]

In clinical trials with miners exposed to manganese-containing dusts, L-dopa relieved extrapyramidal symptoms of both hypo kinetic and dystonic patients. For short periods of time symptoms could also be controlled with scopolamine and amphetamine. BAL and calcium EDTA prove ineffective.

[Gosselin et al: Clinical Toxicology of Commercial Products.]

#### **SECTION 5 FIRE-FIGHTING MEASURES**

#### Extinguishing media

- There is no restriction on the type of extinguisher which may be used.
- Use extinguishing media suitable for surrounding area.

## Special hazards arising from the substrate or mixture

Fire Incompatibility None known.

#### Special protective equipment and precautions for fire-fighters

Fire Fighting	
Fire/Explosion Hazard	<ul> <li>Non combustible.</li> <li>Not considered to be a significant fire risk.</li> <li>Not considered to be a significant fire risk.</li> <li>Acids may react with metals to produce hydrogen, a highly flammable and explosive gas.</li> <li>Heating may cause expansion or decomposition leading to violent rupture of containers.</li> <li>May emit corrosive, poisonous fumes. May emit acrid smoke.</li> <li>When aluminium oxide dust is dispersed in air, firefighters should wear protection against inhalation of dust particles, which can also contain hazardous substances from the fire absorbed on the alumina particles.</li> <li>May emit corrosive fumes.</li> </ul>

#### SECTION 6 ACCIDENTAL RELEASE MEASURES

Personal precautions, protective equipment and emergency procedures

See section 8

#### **Environmental precautions**

See section 12

## Methods and material for containment and cleaning up

Minor Spills	<ul> <li>Drains for storage or use areas should have retention basins for pH adjustments and dilution of spills before discharge or disposal of material.</li> <li>Check regularly for spills and leaks.</li> <li>Clean up all spills immediately.</li> <li>Avoid breathing vapours and contact with skin and eyes.</li> <li>Control personal contact with the substance, by using protective equipment.</li> <li>Contain and absorb spill with sand, earth, inert material or vermiculite.</li> <li>Wipe up.</li> <li>Place in a suitable, labelled container for waste disposal.</li> </ul>
--------------	---

Major Spills	<ul> <li>Clear area of personnel and move upwind</li> <li>Alert Fire Brigade and tell them location a</li> <li>Wear breathing apparatus plus protective</li> <li>Prevent, by any means available, spillage</li> <li>Stop leak if safe to do so.</li> <li>Contain spill with sand, earth or vermicul</li> <li>Collect recoverable product into labelled</li> <li>Neutralise/decontaminate residue (see S</li> <li>Collect solid residues and seal in labelle</li> <li>Wash area and prevent runoff into drains.</li> <li>After clean up operations, decontaminate</li> <li>If contamination of drains or waterways or</li> </ul>	and nature of hazard. e gloves. e from entering drains or water course. lite. I containers for recycling. Section 13 for specific agent). d drums for disposal. e and launder all protective clothing and equipment before storing and re-using.	

Personal Protective Equipment advice is contained in Section 8 of the SDS.

## SECTION 7 HANDLING AND STORAGE

## Precautions for safe handling

Safe handling	<ul> <li>Avoid all personal contact, including inhalation.</li> <li>Wear protective clothing when risk of exposure occurs.</li> <li>Use in a well-ventilated area.</li> <li>WARNING: To avoid violent reaction, ALWAYS add material to water and NEVER water to material.</li> <li>Avoid smoking, naked lights or ignition sources.</li> <li>Avoid contact with incompatible materials.</li> <li>When handling, DO NOT eat, drink or smoke.</li> <li>Keep containers securely sealed when not in use.</li> <li>Avoid physical damage to containers.</li> <li>Always wash hands with soap and water after handling.</li> <li>Work clothes should be laundered separately. Launder contaminated clothing before re-use.</li> <li>Use good occupational work practice.</li> <li>Observe manufacturer's storage and handling recommendations contained within this SDS.</li> <li>Atmosphere should be regularly checked against established exposure standards to ensure safe working conditions are maintained.</li> </ul>
Other information	<ul> <li>Store in original containers.</li> <li>Keep containers securely sealed.</li> <li>Store in a cool, dry, well-ventilated area.</li> <li>Store away from incompatible materials and foodstuff containers.</li> <li>Protect containers against physical damage and check regularly for leaks.</li> <li>Observe manufacturer's storage and handling recommendations contained within this SDS.</li> </ul>

# Conditions for safe storage, including any incompatibilities

Conditions for sale storag	je, including any incompatibilities
Suitable container	<ul> <li>DO NOT use aluminium or galvanised containers</li> <li>Lined metal can, lined metal pail/ can.</li> <li>Plastic pail.</li> <li>Polyliner drum.</li> <li>Packing as recommended by manufacturer.</li> <li>Check all containers are clearly labelled and free from leaks.</li> <li>For low viscosity materials</li> <li>Drums and jerricans must be of the non-removable head type.</li> <li>Where a can is to be used as an inner package, the can must have a screwed enclosure.</li> <li>For materials with a viscosity of at least 2680 cSt. (23 deg. C) and solids (between 15 C deg. and 40 deg C.):</li> <li>Removable head packaging;</li> <li>Cans with friction closures and</li> <li>low pressure tubes and cartridges may be used.</li> <li>-</li> <li>Where combination packages are used, and the inner packages are of glass, porcelain or stoneware, there must be sufficient inert cushioning material in contact with inner and outer packages unless the outer packaging is a close fitting moulded plastic box and the substances are not incompatible with the plastic.</li> <li>Material is corrosive to most metals, glass and other siliceous materials.</li> </ul>
Storage incompatibility	<ul> <li>For aluminas (aluminium oxide):</li> <li>Incompatible with hot chlorinated rubber.</li> <li>In the presence of chlorine trifluoride may react violently and ignite.</li> <li>-May initiate explosive polymerisation of olefin oxides including ethylene oxide.</li> <li>-Produces exothermic reaction above 200 C with halocarbons and an exothermic reaction at ambient temperatures with halocarbons in the presence of other metals.</li> <li>-Produces exothermic reaction with oxygen difluoride.</li> <li>-May form explosive mixtures with oxygen difluoride.</li> <li>-Forms explosive mixtures with sodium nitrate.</li> <li>-Reacts vigorously with vinyl acetate.</li> <li>Aluminium oxide is an amphoteric substance, meaning it can react with both acids and bases, such as hydrofluoric acid and sodium hydroxide, acting as an acid with a base and a base with an acid, neutralising the other and producing a salt.</li> <li>Inorganic acids are generally soluble in water with the release of hydrogen ions. The resulting solutions have pH's of less than 7.0.</li> <li>Inorganic acids neutralise chemical bases (for example: amines and inorganic hydroxides) to form salts - neutralisation can generate dangerously large amounts of heat in small spaces.</li> <li>The dissolution of inorganic acids often generates sufficient heat in the small region of mixing to cause some of the water to boil explosively. The resulting "bumping" can spatter the acid.</li> <li>Inorganic acids react with active metals, including such structural metals as aluminum and iron, to release hydrogen, a flammable gas.</li> <li>Inorganic acids generate flammable and/or toxic gases in contact with dithiocarbamates, isocyanates, mercaptans, nitrides, nitriles, sulfides, and strong reducing agents. Additional gas-generating reactions occur with sulfites, nitrites, thiosulfates (to give H2S and SO3), dithionites (SO2), and even carbonates.</li> </ul>

## Exposure controls

	Engineering controls are used to remove a beyond or place a berrier between the western and the be	and Well designed engine	entrole can be high!					
	Engineering controls are used to remove a hazard or place a barrier between the worker and the ha effective in protecting workers and will typically be independent of worker interactions to provide this		controis can be nighly					
	The basic types of engineering controls are:							
	Process controls which involve changing the way a job activity or process is done to reduce the risk.							
	Enclosure and/or isolation of emission source which keeps a selected hazard "physically" away from							
	"removes" air in the work environment. Ventilation can remove or dilute an air contaminant if designed properly. The design of a ventilation system must match the particular process and chemical or contaminant in use.							
	Employers may need to use multiple types of controls to prevent employee overexposure.							
	Local exhaust ventilation usually required. If risk of overexposure exists, wear approved respirator. C	Correct fit is essential to obtain adec	quate protection.					
	Supplied-air type respirator may be required in special circumstances. Correct fit is essential to ens	ure adequate protection.						
	An approved self contained breathing apparatus (SCBA) may be required in some situations. Provide adequate ventilation in warehouse or closed storage area. Air contaminants generated in the	a workplace possess vaning "esca	upe" velocities which in					
	turn, determine the "capture velocities" of fresh circulating air required to effectively remove the cont							
	Type of Contaminant:		Air Speed:					
	solvent, vapours, degreasing etc., evaporating from tank (in still air).		0.25-0.5 m/s (50-100 f/min.)					
Appropriate engineering controls	aerosols, fumes from pouring operations, intermittent container filling, low speed conveyer transfer acid fumes, pickling (released at low velocity into zone of active generation)	rs, welding, spray drift, plating	0.5-1 m/s (100-200 f/min.)					
	direct spray, spray painting in shallow booths, drum filling, conveyer loading, crusher dusts, gas di zone of rapid air motion)	scharge (active generation into	1-2.5 m/s (200-500 f/min.)					
	grinding, abrasive blasting, tumbling, high speed wheel generated dusts (released at high initial ve air motion).	elocity into zone of very high rapid	2.5-10 m/s (500-2000 f/min.)					
	Within each range the appropriate value depends on:							
	Lower end of the range	Upper end of the range						
	1: Room air currents minimal or favourable to capture	1: Disturbing room air currents						
	2: Contaminants of low toxicity or of nuisance value only.	2: Contaminants of high toxicity						
	3: Intermittent, low production.	3: High production, heavy use						
	4: Large hood or large air mass in motion	4: Small hood-local control only						
	Simple theory shows that air velocity falls rapidly with distance away from the opening of a simple ext of distance from the extraction point (in simple cases). Therefore the air speed at the extraction point distance from the contaminating source. The air velocity at the extraction fan, for example, should be	t should be adjusted, accordingly, a	fter reference to					

Page 9 of 25

## **ICP-MS-ICS-3** Solution AB

	solvents generated in a tank 2 meters distant from the extraction point. Other mechanical considerations, producing performance deficits within the extraction apparatus, make it essential that theoretical air velocities are multiplied by factors of 10 or more when extraction systems are installed or used.
Personal protection	
Eye and face protection	<ul> <li>Safety glasses with unperforated side shields may be used where continuous eye protection is desirable, as in laboratories; spectacles are not sufficient where complete eye protection is needed such as when handling bulk-quantities, where there is a danger of splashing, or if the material may be under pressure.</li> <li>Chemical goggles.whenever there is a danger of the material coming in contact with the eyes; goggles must be properly fitted.</li> <li>Full face shield (20 cm, 8 in minimum) may be required for supplementary but never for primary protection of eyes; these afford face protection.</li> <li>Alternatively a gas mask may replace splash goggles and face shields.</li> <li>Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants. A written policy document, describing the wearing of lenses or restrictions on use, should be created for each workplace or task. This should include a review of lens absorption and adsorption for the class of chemicals in use and an account of injury experience. Medical and first-aid personnel should be trained in their removal and suitable equipment should be readily available. In the event of chemical exposure, begin eye irrigation immediately and remove contact lens as soon as practicable. Lens should be removed at the first signs of eye redness or irritation - lens should be removed in a clean environment only after workers have washed hands thoroughly. [CDC NIOSH Current Intelligence Bulletin 59], [AS/NZS 1336 or national equivalent]</li> </ul>
Skin protection	See Hand protection below
Hands/feet protection	<ul> <li>Elbow length PVC gloves</li> <li>When handling corrosive liquids, wear trousers or overalls outside of boots, to avoid spills entering boots.</li> </ul>
Body protection	See Other protection below
Other protection	<ul> <li>Overalls.</li> <li>PVC Apron.</li> <li>PVC protective suit may be required if exposure severe.</li> <li>Eyewash unit.</li> <li>Ensure there is ready access to a safety shower.</li> </ul>
Thermal hazards	Not Available

#### **Respiratory protection**

Type A Filter of sufficient capacity. (AS/NZS 1716 & 1715, EN 143:2000 & 149:2001, ANSI Z88 or national equivalent)

# SECTION 11 TOXICOLOGICAL INFORMATION

## Information on toxicological effects

Inhaled	Inhalation of vapours or aerosols (mists, fumes), generated by the material duri The material can cause respiratory irritation in some persons. The body's resp Corrosive acids can cause irritation of the respiratory tract, with coughing, chok nausea and weakness. Bronchial and alveolar exudate are apparent in animals exposed to molybdenun fatty changes in liver and kidney. Acute effects of fluoride inhalation include irritation of nose and throat, coughing bleed. Acute inhalation of hydrogen fluoride (hydrofluoric acid) vapours causes severe water in the lungs, and may cause death. The above irritation occurs even with irritating odour, that can be detected at concentrations of about 0.04 parts per severe inflammation and water buildup in the lungs (which may occur with 1 ho intolerable, but a vapour concentration of 30 parts per million is considered as i It is estimated that the lowest lethal concentration for a 5-minute human exposu either skin contact or inhalation may lead to low levels of calcium and magnesiu suggests that repeated exposure produces liver and kidney damage.	onse to such irritation can cause ing and mucous membrane dam a by inhalation. Molybdenum fum a and chest discomfort. A single a irritation of the eye, nose and thr fairly low concentrations of hydre million. Higher levels cause corre ur of exposure). A vapour concent mediately dangerous to life and re to hydrogen fluoride is in the r	further lung damage. lage. There may be dizziness, headache, e may produce bronchial irritation and moderate acute over-exposure may even cause nose roat, delayed fever, bluing of the extremities and ogen fluoride. Hydrogen fluoride has a strong usion of the throat, nose and lungs, leading to tratation of 10 parts per million is regarded as d health. ange of 50 to 250 parts per million. Exposure by
Ingestion	Accidental ingestion of the material may be harmful; animal experiments indicat damage to the health of the individual. Ingestion of acidic corrosives may produce burns around and in the mouth, the speaking may also be evident. Molybdenum, an essential trace element, can in large doses hamper growth ar other symptoms include greying of hair, shrinking of the testicles, reduced fertil mucous membranes. Poisonings rarely occur after oral administration of manganese salts because t Fluoride causes severe loss of calcium in the blood, with symptoms appearing Cardiovascular collapse can occur and may cause death with increased heart	throat and oesophagus. Immedia throat and oesophagus. Immedia to cause loss of appetite, listless ity and milk production, shortnes hey are poorly absorbed from the several hours later including pai	ate pain and difficulties in swallowing and ness and diarrhoea. Anaemia also occurs, and s of breath, incoordination and irritation of the e gut. inful and rigid muscle contractions of the limbs.
Skin Contact	Skin contact with the material may be harmful; systemic effects may result follow. Though considered non-harmful, slight irritation may result from contact because itching and skin reaction and inflammation. Skin contact with acidic corrosives may result in pain and burns; these may be of Contact of the skin with liquid hydrofluoric acid (hydrogen fluoride) may cause is more serious burns, ulceration, blue-gray discoloration, and necrosis may occu. Fluorides are easily absorbed through the skin and cause death of soft tissue an beneath skin. Open cuts, abraded or irritated skin should not be exposed to this material Entry into the blood-stream, through, for example, cuts, abrasions or lesions, m of the material and ensure that any external damage is suitably protected.	se of the abrasive nature of the a deep with distinct edges and may severe burns, erythema, and sw r. Solutions of hydrofluoric acid, nd erode bone. Healing is delaye	heal slowly with the formation of scar tissue. elling, vesiculation, and serious crusting. With as dilute as 2%, may cause severe skin burns. d and death of tissue may continue to spread
Eye	If applied to the eyes, this material causes severe eye damage. Direct eye contact with acid corrosives may produce pain, tears, sensitivity to li completely. Animal testing showed that a 20% solution of hydrofluoric acid (hydrogen fluoric and ischaemia of the conjunctiva. Swelling of the stroma of the cornea occurred eye.	- de) in water caused immediate d	amage in the form of total clouding of the lens
Chronic	Long-term exposure to respiratory irritants may result in airways disease, involv Substance accumulation, in the human body, may occur and may cause some of Animal testing shows long term exposure to aluminium oxides may cause lung the greater the tendencies of causing harm. Manganese is an essential trace element. Chronic exposure to low levels of mo- slurred speech, disordered muscle tone, fatigue, anorexia, loss of strength and High levels of molybdenum can cause joint problems in the hands and feet with elevated levels of enzymes and cause over-activity of the thyroid gland. Repeated or prolonged exposure to acids may result in the erosion of teeth, sw and inflammation of lung tissue often occurs. Extended exposure to inorganic fluorides causes fluorosis, which includes sign appetite, diarrhoea or constipation, weight loss, anaemia, weakness and gener Hydrogen fluoride easily penetrates the skin and causes destruction and corros in the mouth and throat and blood calcium levels are dangerously reduced.	oncern following repeated or lon- disease and cancer, depending anganese can include a mask-lik lenergy, apathy and poor concer pain and lameness. Molybdenun velling and/or ulceration of mouth s of joint pain and stiffness, toott al unwellness. There may also b	g-term occupational exposure. on the size of the particle. The smaller the size, the facial expression, spastic gait, tremors, tration. In compounds can also cause liver changes with a lining. Irritation of airways to lung, with cough, or discolouration, nausea and vomiting, loss of e frequent urination and thirst.

#### For Manganese and its Compounds:

Environmental Fate: Manganese is a naturally occurring element in the environment occurring as a result of weathering of geological material. It also occurs from its use in steel manufacture/ coal mining. The most commonly occurring of 11 possible oxidation states are +2, (e.g. manganese chloride or sulfate), +4, (e.g. manganese dioxide), and +7 (e.g. potassium permanganate), although the latter is unstable in the environment.

(Japan) - Bioconcentration Data 7. METI (Japan) - Bioconcentration Data 8. Vendor Data

Atmospheric Fate: Elemental/inorganic manganese compounds may exist in air as suspended particulates from industrial emissions or soil erosion. Manganese-containing particles are mainly removed from the atmosphere by gravitational settling - large particles tend to fall out faster than small particles. The half-life of airborne particles is usually on the order of days, depending on the size of the particle and atmospheric conditions. Some removal by washout mechanisms such as rain may also occur, although it is of minor significance in comparison to dry deposition. Terrestrial Fate: Manganese in soil can migrate as particulate matter to air or water and soluble manganese compounds can be leached from the soil. High soil pH reduces manganese availability while low soil pH will increase availability, even to the point of toxicity. Soils high in organic matter  $\Phi$  tie up  $\Phi$  manganese such that high organic matter soils can be manganese deficient. Fertilization with materials containing chlorine, nitrate, and/or sulfate, can also enhance manganese to soils may not be a readily reversible process. At low concentrations, manganese may be fixed by clays and will not be released into solution readily. Bacteria and microflora can increase the mobility of manganese.

Aquatic Fate: Most manganese salts, with the exception of phosphates, carbonates, and oxides, are soluble in water. Solubility is controlled by the precipitation of insoluble forms, (species). In most oxygenated waters, the most common form is insoluble manganese oxide. Manganese chloride is the dominant form at pH 4-7, but may oxidize at pH>8 or 9. Ecotoxicity: While lower organisms, (plankton, aquatic plants, and some fish), can significantly bioconcentrate manganese, higher organisms, (including humans), tend to maintain manganese

balance. Manganese in water may be significantly concentrated at lower levels of the food chain. Uptake of manganese by aquatic invertebrates and fish increases with temperature and decreases with pH. Fish and crustaceans appear to be the most sensitive to acute and chronic exposures. The substance has low toxicity to trout but, is moderately toxic to Coho salmon. The substance is toxic to Daphnia water fleas and moderately toxic to freshwater algae Pseudomonas putida and

Photobacterium phosphoreum bacteria.

## **ICP-MS-ICS-3 Solution AB**

#### For Molybdenum:

Environmental Fate: Molybdenum is an essential micronutrient in plants and animals. It is commonly used in the manufacture of steel alloys. Based on the high concentration of molybdenum in all analyzed waste types, the exposure of the environment to molybdenum is regarded as significant. The limited amount of data regarding its toxicity makes it impossible to evaluate the potential for adverse environmental and health effects from molybdenum exposure. Molybdenum is generally found in two oxidation states in nature, Mo(IV) and Mo(VI). In oxidizing environments, Mo(VI) dominates and it is commonly present as molybdenum contains seven isotopes. Molybdenum oxidizes at elevated temperatures.

Atmospheric Fate: Molybdenum can be deposited via dry/wet deposition; however, atmospheric exposure has been identified as a minor source to terrestrial and aquatic habitats.

Terrestrial Fate: Molybdenum is a naturally occurring substance in soil. Soil molybdenum is a potentially toxic element, but no cases have been reported of molybdenum toxicity to animals from consumption of forage grown on sludge-amended soils. Microbes are expected to transform the substance.

Aquatic Fate: Molybdenum disulfide is sparingly soluble in water but oxidizes to more soluble molybdates, which are stable in water. At pH 3-5, molybdate frequently shifts to hydrogen molybdate. Low pH molybdenum is usually adsorbed to sediment composed of clay, or other minerals that are prone to weathering. Molybdenum in the water is expected to be taken up by aquatic organisms. Concentrations of the substance in sediments are by site-specific factors like flow rate, and other factors, (e.g. organic content, pH)

Ecotoxicology: Molybdenum cause adverse effects in ruminant animals. Livestock have been injured by forage grown on soils containing the element. The substance s toxicological properties in mammals are governed, to a large extent, by its interaction with copper and sulfur; residues of molybdenum alone are not sufficient to diagnose poisoning by the substance. Domestic ruminants, especially cattle, are especially sensitive to molybdenum poisoning, when copper and inorganic sulfate are deficient. The resistance of small laboratory animals, and wildlife, is at least 10X that of cattle. Mule deer are not adversely affected by the substance. The substance may have a negative impact on reproduction in domestic birds and there is inadequate data on its effects on waterfowl and most mammals.

#### For Vanadium Compounds:

Environmental Fate: Vanadium is travels through the environment via long-range transportation in the atmosphere, water, and land by natural and man-made sources, wet and dry deposition, adsorption and complexing. From natural sources, vanadium is probably in the form of less soluble trivalent mineral particles.

Atmospheric Fate: Vanadium generally enters the atmosphere as an aerosol. Natural and man-made sources of vanadium tend to release large particles that are more likely to settle near the source. Smaller particles, such as those emitted from oil-fueled power plants, have a longer residence time in the atmosphere and are more likely to be transported farther away from the site of release.

Terrestrial Fate: Soil - Transport and partitioning of vanadium in soil is influenced by pH and reduction potential. Ferric hydroxides and solid bitumens (organic) are the main carriers of vanadium in the sedimentation process. Iron acts as a carrier for trivalent vanadium and is responsible for its diffusion through molten rocks where it becomes trapped during crystallization. Vanadium is fairly mobile in neutral or alkaline soils, but its mobility decreases in acidic soils. Under oxidizing, unsaturated conditions, some mobility is observed, but under reducing, saturated conditions, vanadium is immobile. Plants - Vanadium levels in terrestrial plants are dependent upon the amount of water-soluble vanadium available in the soil as well as pH and growing conditions. The uptake of vanadium into the above-ground parts of many plants is low, although root concentrations have shown some correlation with levels in the soil. Certain legumes have been shown to be vanadium accumulators and the root nodules of these plants may contain vanadium levels three times greater than those of the surrounding soil. Fly agaric (Amanita muscaria) mushrooms are known to actively accumulate vanadium.

Aquatic Fate: Vanadium is eventually adsorbed to hydroxides or associated with organic compounds and is deposited on the sea bed. Vanadium is transported in water by solution (13%) or suspension (87%). Upon entering the ocean, vanadium is deposited to the sea bed. Only about 0.001% of vanadium entering the oceans is estimated to persist in soluble form. Sorption and biochemical processes are thought to contribute to the extraction of vanadium from sea water. Adsorption to organic matter as well as to manganese oxide and ferric hydroxide results in the precipitation of dissolved vanadium. Biochemical processes are also of importance in the partitioning from sea water to sediment.

Ecotoxicity: Some marine organisms, in particular the sea squirts, bioconcentrate vanadium very efficiently, attaining body concentrations approximately 10,000 times greater than the ambient sea water. Upon the death of the organism, the body burden adds to the accumulation of vanadium in silt. In general, marine plants and invertebrates contain higher levels of vanadium than terrestrial plants and animals. In the terrestrial environment, bioconcentration is more commonly observed amongst the lower plant phyla than in the higher, seed-producing phyla. Vanadium appears to be present in all terrestrial animals; however tissue concentrations in vertebrates are often so low that detection is difficult. The highest levels of vanadium in terrestrial mammals are generally found in the liver and skeletal tissues. No data are available regarding biomagnification of vanadium within the food chain, but human studies suggest that it is unlikely. Bioaccumulation appears to be unlikely.

#### Ecotoxicity:

The tolerance of water organisms towards pH margin and variation is diverse. Recommended pH values for test species listed in OECD guidelines are between 6.0 and almost 9. Acute testing with fish showed 96h-LC50 at about pH 3.5

For Fluorides: Small amounts of fluoride have beneficial effects however, excessive intake over long periods may cause dental and/or skeletal fluorosis. Fluorides are absorbed by humans following inhalation of workplace and ambient air that has been contaminated, ingestion of drinking water and foods and dermal contact. Populations living in areas with high fluoride levels in groundwater may be exposed to higher levels of fluorides in their drinking water or in beverages prepared with the water. Among these populations, outdoor labourers, people living in hot climates, and people with excessive thirst will generally have the greatest daily intake of fluorides because they consume greater amounts of water.

Atmospheric Fate: Both hydrogen fluoride and particulate fluorides will be transported in the atmosphere and deposited on land or water by wet and dry deposition. Non-volatile inorganic fluoride particulates are removed from the atmosphere via condensation or nucleation processes. Fluorides adsorbed on particulate matter in the atmosphere are generally stable and are not readily hydrolyzed, although they may be degraded by radiation if they persist in the atmosphere. Fluorine and the silicon fluorides (fluosilicates, silicofluorides) are hydrolyzed in the atmosphere to form hydrogen fluoride. Hydrogen fluoride may combine with water vapour to produce an aerosol or fog of aqueous hydrofluoric acid. Inorganic fluoride compounds, with the exception of sulfur hexafluoride, are not expected to remain in the troposphere for long periods or to migrate to the stratosphere. Estimates of the residence time of sulfur hexafluoride in aerosols can be transported over large distances by wind or as a result of atmospheric turbulence. Fluorosilicic acid and hydrofluoric acid in high aquatic concentrations such as may be found in industrial waste ponds may volatilize, releasing silicon tetrafluoride and hydrogen fluoride into the atmosphere. Soluble inorganic fluorides may also form aerosols at the air/water interface or vaporize into the atmosphere whereas undissolved species generally undergo sedimentation.

Terrestrial Fate: Soils - Atmospheric fluorides may be transported to soils and surface waters through both wet and dry deposition processes where they may form complexes and bind strongly to soil and sediment. Solubilisation of inorganic fluorides from minerals may also be enhanced by the presence of bentonite clays and humic acid. Factors that influence the mobility of inorganic fluorides in soil are pH and the formation of aluminium and calcium complexes. In more acidic soils, concentrations of inorganic fluoride were considerably higher in the deeper horizons. The low affinity of fluorides for organic material results in leaching from the more acidic surface horizon and increased retention by clay minerals and silts in the more alkaline, deeper horizons. The maximum adsorption of fluoride to soil was reported to occur at pH 5.5. In acidic soils with pH below 6, most of the fluoride is in complexes with either aluminium or iron. Fluoride in alkaline soils at pH 6.5 and above is almost completely fixed in soils as calcium fluoride, if sufficient calcium carbonate is available. Fluoride is extremely immobile in soil.

Aquatic Fate: Fresh Water: - In water, the transport and transformation of inorganic fluorides are influenced by pH, water hardness and the presence of ion-exchange materials such as clays. In natural water, fluoride forms strong complexes with aluminium in water, and fluorine chemistry in water is largely regulated by aluminium concentration and pH. Below pH 5, fluoride is almost entirely complexed with aluminium and consequently, the concentration of free F- is low. Once dissolved, inorganic fluorides remain in solution under conditions of low pH and hardness and in the presence of ion-exchange material. Sea Water - Fluoride forms stable complexes with calcium and magnesium, which are present in sea water. Calcium carbonate precipitation dominates the removal of dissolved fluoride form sea water. The residence time for fluoride in ocean sediment is calculated to be 2-3 million years.

Ecotoxicity: Fluorides have been shown to accumulate in animals that consume fluoride-containing foliage. However, accumulation is primarily in skeletal tissue and therefore, it is unlikely that fluoride will biomagnify up the food chain.

Prevent, by any means available, spillage from entering drains or water courses.

DO NOT discharge into sewer or waterways.

#### Persistence and degradability

Ingredient	Persistence: Water/Soil	Persistence: Air
ammonium phosphate, monobasic	HIGH	HIGH
water	LOW	LOW
ammonium metavanadate	HIGH	HIGH

# SECTION 13 DISPOSAL CONSIDERATIONS

## Waste treatment methods

	Containers may still present a chemical hazard/ danger when empty.
	Return to supplier for reuse/ recycling if possible.
	Otherwise:
	If container can not be cleaned sufficiently well to ensure that residuals do not remain or if the container cannot be used to store the same product, then
	puncture containers, to prevent re-use, and bury at an authorised landfill.
	Where possible retain label warnings and SDS and observe all notices pertaining to the product.
Product / Packaging	Recycle wherever possible.
disposal	Consult manufacturer for recycling options or consult local or regional waste management authority for disposal if no suitable treatment or disposal facility can be identified.
	Treat and neutralise at an approved treatment plant. Treatment should involve: Neutralisation with soda-ash or soda-lime followed by: burial in a land-fill
	specifically licensed to accept chemical and / or pharmaceutical wastes or Incineration in a licensed apparatus (after admixture with suitable combustible material).
	<ul> <li>Decontaminate empty containers with 5% aqueous sodium hydroxide or soda ash, followed by water. Observe all label safeguards until containers are cleaned and destroyed.</li> </ul>

#### US. CALIFORNIA PROPOSITION 65

WARNING: This product contains a chemical known to the State of California to cause cancer and birth defects or other reproductive harm

#### US - CALIFORNIA PREPOSITION 65 - CARCINOGENS & REPRODUCTIVE TOXICITY (CRT): LISTED SUBSTANCE

Cadmium and cadmium compounds: Cadmium, Cobalt metal powder, Nickel (Metallic) Listed

National Inventory	Status
Australia - AICS	Y
Canada - DSL	Υ
Canada - NDSL	N (sodium; calcium; magnesium nitrate; ammonium chloride; zinc; potassium; ammonium metavanadate; titanium; copper; ammonium phosphate, monobasic; water; selenium; aluminium; molybdenum; arsenic; cobalt; nickel; sulfuric acid; iron; ammonium acetate; chromium; hydrofluoric acid; silver; cadmium; manganese(II) acetate; nitric acid)
China - IECSC	Y
Europe - EINEC / ELINCS / NLP	Y
Japan - ENCS	N (sodium; calcium; magnesium nitrate; zinc; potassium; titanium; copper; ammonium phosphate, monobasic; water; selenium; aluminium; molybdenum; arsenic; cobalt; nickel; iron; ammonium acetate; chromium; hydrofluoric acid; silver; cadmium; manganese(II) acetate; nitric acid)
Korea - KECI	Y
New Zealand - NZIoC	Y
Philippines - PICCS	N (manganese(II) acetate)
USA - TSCA	Y
Legend:	Y = All ingredients are on the inventory N = Not determined or one or more ingredients are not on the inventory and are not exempt from listing(see specific ingredients in brackets)

## **SECTION 16 OTHER INFORMATION**

#### Other information

## Ingredients with multiple cas numbers

Name	CAS No
aluminium	7429-90-5, 91728-14-2
calcium	7440-70-2, 8047-59-4
magnesium nitrate	13446-18-9, 10377-60-3, 10213-15-7
ammonium chloride	12125-02-9, 152128-19-3
hydrofluoric acid	7664-39-3, 790596-14-4
copper	7440-50-8, 133353-46-5, 133353-47-6, 195161-80-9, 65555-90-0, 72514-83-1

Classification of the preparation and its individual components has drawn on official and authoritative sources as well as independent review by the Chemwatch Classification committee using available literature references.

The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios. Scale of use, frequency of use and current or available engineering controls must be considered.
